

THE SIXUE SENSE

Market Correction on the Horizon?

Recent market volatility in India, particularly among mid-cap, small-cap, and PSU stocks, raises concerns about a potential correction as we approach the general elections. This week's Sixth Sense dives deep into the possibility of a broader market correction in India, employing advanced wave analysis of the S&P 500 to gauge the global market sentiment.

The good news? Qartelz is hosting a live market session this Monday, equipping you with strategies to navigate volatility using Advanced Wave Theory.

Join us for an insightful week and don't miss the live session on Monday!

(Complimentary Section for The Sixth Sense Lovers)

People often ask the question "how to get clarity on next day's Market movement".

We are giving you a solution in this section.

First, let us have a look at the most important support and resistance level for NIFTY on Monday

NIFTY WEEKLY OUTLOOK!!

Index is making an Expanded Flat Structure?

Even though NIFTY was making higher highs and higher lows, the index as a whole was making a corrective structure, which looks like a B wave. Moreover, the relation between A and B waves can be summarized as follows.

$$B = 138.2\% \text{ of } A$$

In an expanded flat structure Wave C is calculated as

C = 161.8% of A

(In expanded flat structure, wave A is the parent wave)

A = 993.00

B = 1372.00

B wave Target is calculated as,

B Target = 21132+1372

= 22504

NIFTY high was registered near B wave target. So, possibility of an expanded flat is very high in this structure. In such case, C wave target is calculated as

C = 1607

C Target = 20920

Short term Cycle Completion in S&P 500

S&P 500 has completed a major cycle after touching the high at 5189. After recording a high at 5189, S&P 500 index continuously found resistance near the area and failed to continue higher.

S&P 500 has got a strong support at 5054 levels. If this level is broken, then we may expect a global sell off and it can get reflected in Indian markets as well.

What do the findings suggest?

Analysis says that there is a high PROBABILITY for correction to continue for some more time. Remember, it is a high probability scenario, but not certainty. So, we have to keep in mind the possibility of uptrend to resume with strict stop losses

What are the Key Support Levels for NIFTY to watch out for?

NIFTY might find interim support at 21874 and if this level is broken, then water fall move can be expected to lower levels and market might touch 21657 levels.

NIFTY Key Resistance Levels and Possibility of Downtrend Reversal

NIFTY might reverse the downtrend move only if NIFTY can close above 22242. If the index closes above 22392, then we may consider the downtrend completed and market might start trending higher again.

BANKNIFTY Shows Weakness BANKNIFTY Hourly Cycle

The index has got strong resistance near 46615. As long as BANKNIFTY can not close above this level, downward move is expected to be continued.

How to Trade BANKNIFTY on Monday BANKNIFTY 15 Minutes Cycle

BANKNIFTY index is weak and index might face strong resistance near 46774 on Monday. Index has got support at 46374. If this level is broken, index might fall to 46053.
